

Smart Product Analytics SAVIC Apps

Smart Product Analytics helps companies track sales by product and by product category in order to assess past, present, and future business information. This system helps keep track of sales and is used by management to make decisions about the next cycle of sales. Using Smart Product Analytics, you can analyse revenue over a specified period of time. A business's revenue growth, whether positive or negative, can be determined by comparing two fiscal periods. Revenue trends can be predicted by tracking sales growth.

Product Analysis

possible to receive a complete picture of your products and sales and also by visualizing your product and sales data which provides you with a comprehensive "big picture" of the financial health and activity of your business

Product Performance

It shows the Product Performance by ranking the product sales based on revenue performance. This helps your sales team which products are selling well and which are failing to and to resonate with customers

Amount Analysis

It helps in analyzing the year-on-year, quarter-on-quarter and month-on-month amount . It compares Amount between two fiscal periods which helps management to keep track of sales

Sales Growth Analysis

Smart Product Analytics helps in analyzing the revenue over a fixed period of time. Comparing revenue between two fiscal periods demonstrates the rate of growth – positive or negative, of a business. Tracking sales growth helps to predict revenue trends. Setting attainable sales revenue goals can inspire performance and keep sales efforts aligned

Weight Analysis

It helps in analyzing the year-on-year, quarter-on-quarter and month-on-month weight. It compares Weight between two fiscal periods which helps management to make right decisions

Growth Analysis

It shows the Amount growth and Weight growth which helps the management to make right decisions
